**PS-1213CT: 1.3 Amp Power Supply Mounted in a Metal Can with Transformer and Battery**

**PS-1225CT: 2.5 Amp Power Supply Mounted in a Metal Can**

**PS-1225TB: 2.5 Amp Power Supply with Transformer and Battery**

**PS-1225CTB: 2.5 Amp Power Supply Mounted in a Metal Can with Transformer and Battery**

## SELF-RESETTING *SMARTFUSE* PROTECTION

## HEAVY DUTY BATTERY CHARGING CIRCUIT FOR QUICK RECHARGE

The PS-1213 and PS-1225 12 Volt DC power supply kits provide a convenient and economical way to provide power in a wide variety of applications. Whether you need to power door strikes, motion detectors, timer modules, or just plain battery backup, a Stealth power supply kit will do the job.

The kits are available in 1.3 Amp and 2.5 Amp versions. TB models are supplied with a plug-in transformer and a 7 AH battery. The CT models are mounted in a metal can and are supplied with a & AH battery. CTB versions are mounted in a metal can and include a 7 AH battery and a transformer.

The power supplies are protected by a self-resetting *SmartFuse*. This operates like a glass fuse, but resets after the problem is removed. This eliminates the hassle of replacing conventional glass fuses, while still providing ample protection. Each power supply also has a battery charging circuit that enables it to charge a battery up to 8 times faster than other brands.

Metal can dimensions are 11.25 x 11.25 x 3.5 inches.
